底层设计核心提升 Proxy

熟悉 Proxy 相关的，也可以自己找一些扩展链接，我们后面的课程会讲

```

let onWatchFn = (obj, setBind, getLogger) => {
  let handler = {
    get(target, property, receiver) {
      getLogger(target, property)
      return Reflect.get(target, property, receiver)
    },
    set(target, property, value, receiver) {
      setBind(value, property)
      return Reflect.set(target, property, value)
    }
  }
  return new Proxy(obj, handler)
}

let obj = { name: '平安' }
let p = onWatchFn(
  obj,
  (v, property) => {
    console.log(`监听到属性${property}改变为${v}`)
  },
  (target, property) => {
    console.log(`'${property}' = ${target[property]}`)
  }
)
p.name = '中国平安' // 监听到属性 name 改变
p.name // 'name' = '中国平安'

样式提升需求：tailwindcss

用 tailwindcss 自己试用下响应式写法和 @apply 的写法

tailwindcss 有哪些插件
